YASH KOPARKAR

Software Engineering Intern
India | (+91) 9373782519 | koparkaryash41@gmail.com

SUMMARY

Full Stack Software Engineer in web and AI enhanced services. Delivered MERN applications that cut system errors by 30% through disciplined backend integration and database design. Engineered AI driven booking and RAG based support platforms using LangChain and Groq LLM APIs, demonstrating strong problem solving depth reflected in 350+ LeetCode solutions. Combines rigorous engineering principles with a growth mindset for reliable, high performing products.

SKILLS

Programming Languages: Python, JavaScript (ES6+), C++, C, Java, SQL

Frontend Development: React.js, HTML5, CSS3, Bootstrap, EJS, Responsive Web Design

Backend Development: Node.js, Express.js, FastAPI, RESTful API, MVC Architecture, Passport.js, JWT based Authorization

Databases & Data Tools: MongoDB, MySQL, Mongoose, MongoDB Atlas Vector Search, ChromaDB

AI/Machine Learning & LLMs: LangChain, LangGraph.js, RAG, NumPy, Pandas, Scikit Learn, Matplotlib, Groq's Llama 3.3 70B API, @xenova/transformers embeddings, LLM, MCP (Model Context Protocol)

Developer Tools & Cloud: Git, GitHub, VS Code, Postman, Cloudinary, Mapbox, Leaflet, Razorpay, Joi, Vercel, Render, Langsmith

Core Computer Science: Data Structures, Algorithms, Object Oriented Programming, Computer Science Fundamentals, Problem Solving

Software Engineering Practices: Software Engineering, Software Development, Software Design, Software Testing, Engineering Principles, Requirements Analysis, System Reliability, Performance Optimization, Observability, Monitoring, Operations, New Technologies, Software Solutions

EXPERIENCE

Software Development Engineer (SDE) Intern | Bluestock Fintech | Remote | Mar 2026—Apr 2026

- Developed and shipped a microservice in Python, applying OOP design patterns and engineering principles to meet defined requirements.
- Engineered automated unit tests and monitoring hooks, enhancing system reliability and observability while collaborating with cross functional teammates.
- Optimized MongoDB query pipelines through index refinement, significantly reducing response latency and supporting customer focused performance goals.

Full Stack Development Apprentice | Apna College | Remote | Sep 2025—Dec 2025

- Designed and deployed full stack web applications with React, Node.js, and MongoDB, adhering to OOP principles and software design best practices.
- Implemented secure JWT authentication and RESTful APIs within an MVC framework, ensuring robust testing and compliance with engineering standards.
- Led backend integration and schema design, improving data integrity and achieving a 30% reduction in system errors.
- Added application level logging and health checks, enhancing observability and operational monitoring for production deployments.

PROJECTS

SuppotAI – Agentic RAG Customer Support System with Embeddable Widget | Aug 2026—Aug 2026

- Built an agentic RAG pipeline with query grading, reformulation, and escalation logic using LangGraph, ChromaDB vector search, and Groq's LLM API to reduce hallucinated responses and auto escalate unresolved queries.
- Integrated MCP (Model Context Protocol) for tool calling (order status checks, ticket creation) and built an embeddable JavaScript chat widget clients can drop into any site via a single script tag.

Chat with PDF - Cerebras LLM | Jun 2026—Jun 2026

- Built a chatbot to query PDF documents using Retrieval Augmented Generation (RAG).
- Implemented document chunking, embeddings, and semantic retrieval for accurate responses.

Wanderlust - AI Powered MERN Booking Platform | Nov 2025—Nov 2025

- Architected a full stack Airbnb style booking platform using RESTful APIs and MVC architecture, with Passport.js authentication, Cloudinary image uploads, and Joi based validation for listings and reviews.
- Built an AI powered booking assistant using LangGraph.js and Groq's Llama 3.3 70B API with an interruptBefore confirmation gate, and enabled semantic listing search via MongoDB Atlas Vector Search with local @xenova/transformers embeddings; integrated Mapbox/Leaflet for location visualization and Razorpay for payments. Integrated Mapbox for dynamic location visualization to enhance user experience.

EDUCATION

BE - Computer Engineering | Dr.D.Y. Patil College of Engineering and Innovation | Pune | Jan 2023—Present

- 8.19 CGPA

CERTIFICATIONS

- Full Stack Web Development: Demonstrating strong proficiency in Node.js, Express.js, JavaScript, React, MongoDB.
- Generative AI Professional: from Oracle

ACHIEVEMENTS

- LeetCode Problem Solving: Solved 350+ problems on LeetCode (C++), maintaining a 100 day consistent solving streak; earned the 50 and 100 Days LeetCode Badges (2025).
- Inter College Cricket Competition: Captained and won an Inter College Cricket competition (SPPU Organised Championship), volunteered with the college sports committee to plan and execute inter college sports events.
- Code O Vita Participation: Participated in Code O Vita, organised by DYP Pimpri.
