

Wanderlust — Hosting Listings & General Troubleshooting

Creating a Listing (For Hosts)

- Go to "Create Listing" from your Dashboard.
- Fill in the title, description, location, price, and category.
- Upload photos — images are stored and served via Cloudinary, so uploads may take a few seconds depending on file size.
- Set the exact location using the Mapbox location picker; this determines where your listing appears on maps and in location-based search.
- Submit the listing — it becomes searchable immediately, including through semantic search.

Editing or Removing a Listing

- Hosts can edit listing details (price, description, photos, availability) anytime from "My Listings."
- Removing a listing takes it off search results and existing bookings are not affected, but no new bookings can be made.

Listing Validation Rules

- All required fields (title, description, price, location, at least one image) must be filled in — the platform validates input before a listing can be published (via Joi validation), and will show an error indicating which field needs attention.

General Troubleshooting

Issue	Likely Cause	Resolution
Page won't load / blank screen	Temporary connectivity or server issue	Refresh the page; try again in a few minutes
Image upload stuck or fails	Large file size or unstable connection	Compress the image or retry upload
"Validation error" when submitting a listing	A required field is missing or improperly formatted	Check the highlighted field and correct it

Issue	Likely Cause	Resolution
Map/location picker not responding	Browser or Mapbox load issue	Refresh the page; ensure location permissions aren't blocking the map
Changes to profile/listing not saving	Session expired mid-edit	Log in again and retry

When to Escalate to a Human Agent

The AI assistant should hand off to a human support agent when:

- The issue involves a payment discrepancy that isn't resolved by the standard refund flow.
- A user reports a safety concern about a listing or another user.
- The user explicitly asks to speak to a human.
- The same issue persists after the suggested troubleshooting steps.
